(1) Identify the list of variables and datatypes for e-commerce.

List of variables

Search bar → string
Add to cart → object
whistlist → objet
Quantity → int
product ID → int
price → float
payment method → string
Rating → float
Stock availability → int
order ID → int
profile → string
Address → string
Delivery status → string
wallet → float

(2) Identify the list of variables and datatypes for the followins

(i) Bill of an amozon order
(ii) Train ticket
(iii) A current bill
(iv) Gas Bill

① Bill of an amazon order

Variables	Data Types
Order Id	→ string
Customer Name	→ string
product Name	→ string
quantity	→ Integer
price	→ float
total Amount	→ float
payment method	→ string
order Date	→ Date
Discount	→ float
Tax	→ float
Address	→ string
Mobile number	→ long int

② Current Bill:

Variables	Datatypes
Consumer name	→ string
Address	→ string
Date	→ string
present reading	→ int
previous reading	→ int
Additional charges	→ float
electricity	→ float
Total bill amount	→ float

structure code → string
Bill amount → float
Net amount → float
units → int
Time → string
ERO Number → int

③ Gas Bill

Variables	Datatypes
Address	→ string
mobileNO	→ string
product	→ string
Delivery charges	→ float
Total amount	→ float
MI	→ string
Consumername	→ string
Consumer No	→ int
Cpp ID	→ string
category	→ string
cbc status	→ string
Hose Expiry	→ string
subsidy consumed	→ string

(4) A train/Bus ticket :

Variables	Datatypes
Name	→ string
Ticket number	→ int
Age	→ int
Distance	→ int
PNR	→ int
Time	→ string
Address	→ string
Age	→ int
Gender	→ char
Booking Date	→ string
Transcation ID	→ int
~~Address~~	
Ticket fare	→ float
seat number	→ string
Train Name	→ string
place	→ string
Train number	→ int
